
CASE # 6

*The answer to this case will appear in the November 2006 issue of **Military Medicine***

History: A 35-year-old female presents with a 10-year history of bilateral shoulder and left hip pain. She reports that the shoulder pain is worse with abduction and that it has progressively worsened over the past year. Plain film radiography was obtained of both shoulders and the left hip:

What is (are) the finding(s)? What is the differential diagnosis? Best diagnosis?
